Description

I tried the mod blogroll with an example opml file from wikipedia, and the rss icons doesn't link to the expected mp3 but to the same url as the url of the browser in tiki (tiki-list_file_gallery.php?galleryId=1, tiki-admin_modules.php, ...)

This happened with this blogroll:

<http://static.userland.com/gems/radiodiscuss/playlist.opml>

The one I used for documentation. After fixing the problem, if so, please, check documentation page to see if it's correct (I didn't understand that much about the whole thing myself ...):

<http://doc.tikiwiki.org/Mod+blogroll>

Moreover, with this other opml file:

<http://www.scripting.com/feeds/top100.opml>

The rss icons point to xml files, but no text is shown between the number of the item and the rss icon. (error). See attached image to this tracker item.
