### Description

Hi -

I am using the latest tiki-HEAD and something is wrong with wiki display. The tiki-showpage.tpl has a list of options to show categories on the wiki page, such as `$feature_categorypath`, `$feature_categories`, and `$is_categorized`

It appears from debug that `$is_categorized` is not set on my pages despite the fact that the pages are, in fact, categorized. Any ideas?

### Solution
