Description
    For translation, I would like a way to duplicate an entire structure, and have Tiki automatically build the translation relationships between wiki pages.

    For example, consider that I have the following structure in English

    Structure Name
    Page Foo
    ..Page Bar
    ..Page Alpha

    Now I want to translate the structure to Spanish. I want Tiki to create (automatically):

    Structure Name, sp
    Page Foo, sp
    ..Page Bar, sp
    ..Page Alpha, ap

    AND create the translation relationships between the specific pages (for example from "Page Foo" to "Page Foo, sp"

Solution

Structures are now multilingual, without duplication

The real case scenario (as we have on doc.tikiwiki.org) is that not all pages are translated.

So the structure should fall back to another language when a page is not available.

Rick Sapir / Tiki for Smarties 13 Aug 07 21:06 GMT-0000

I want to pre-build all the necessary pages (even if they are blank to begin with). If a page to be created from the structure does not already exist, maybe tiki could populate it with "dummy" text, indicating that a translation is not yet available.

Rick Sapir / Tiki for Smarties 22 Aug 07 20:17 GMT-0000

Maybe this isn't needed. I wonder if the "use best language" option could work here. I envision a single structure. For example:

A > B > C --> D (all in English)

X is a Spanish translation of B
Y is a French translation of B

Z is a French translation of C

If language = ES, the structure would be:
A >~~X~~ > C --> D

If language = FR, the structure would be:
A >~~Y~~ > Z --> D

Any way that Tiki could handle this automatically?
