Description
    Please see:
    http://phplayersmenu.sourceforge.net/demo.php

    phplayersmenu has 5 types.

    $types'vert' = 'layersmenu.inc.php';
    $types'horiz' = 'layersmenu.inc.php';
    $types'tree' = 'treemenu.inc.php';
    $types'phptree' = 'phptreemenu.inc.php';
    $types'plain' = 'phptreemenu.inc.php';

    Tiki is only using 3.

    "Two classes are provided to prepare also accessibility solutions, i.e. "server-side based" tree menus
    (that have just the same look of the above mentioned JavaScript-based tree menus, but require the
    PHP support on the web server) and plain menus that do not require the JavaScript support to the
    browser."

    Related:
    Menu items with link type options (framed, new window, replace)
    http://dev.tikiwiki.org/tiki-view_tracker_item.php?itemId=521

    We could also let the user determine an icon for each menu item.

Solution
    Won't do. We are moving all to jQuery.

Importance
    5

Priority
