Description
> Forums are getting powerful enough to substitute mailing lists on many tiki sites (yahhogroups, etc.). However, notification messages from forums cannot be added easily to local email filters since the subject doesn't contain a label like [Forum X - site Y] to ease this task.

> 📋
> ───

>> [Forum X - site Y]

> I guess this must be very easy for a coder (just adding some variable to a smarty template? and adding a call to that variable if needed from the related .php or .tpl file - I just get the rough idea... I wish I could do that myself...)

Solution
> Add label [Forum X site Y] or similar

I just added 200 points myself to my own item... to make it clear that this is just for fun (to show that there is a rating hole....).
Created using this URL:
http://dev.tikiwiki.org/tiki-view_tracker_item.php?trackerId=5&itemId=1390&fieldId=62&rate=200

the code should check that a user cannot vote more than the range allowed by the tracker item rating form... (2, in this case, no 200 ;-)
