### Description

Show Category Path + Show Category Objects was implemented a long time ago, and somewhat in a rush. One of those temporary things which became permanent. It only works in wiki pages, yet it would be logical to have this throughout the various features.

Seeing the list of items in the same category is very useful as contextual navigation.

(Workspace Roadmap)) : will be easy now, perhaps a module?

Bernard Sfez / Tiki Specialist 31 Oct 21 08:31 GMT-0000

From what I could quickly test, it seems it is still the case with Tiki23.

From my understanding, the plugin "Show Category Path" is a wiki plugin (for a wiki page) that display the Category Path for "this" (the wiki page) object.

Having the same for tracker items, files, etc exist at the feature level.

Eventually choosing which object you want the category for to be displayed should help, but it look like it will be very specific and you can already do something very similar with a plugin list (using alias plugin would make it easier ?)

Can you explain, how do you see that happen ?
