Description

In version 1.10, when selecting the Autocreate Corresponding Category in trackers, the new categories are created. However, when they display, ie. in any area where you would assign a category, like article or blog, the category is listed by "tracker 15, item 53" or such and not by the description of the tracker.

Problem still appears in 5.0.

Would be nice if you could specify a fieldId that would be used as the autocreated category name.
