Description

Help!

The locations drop down menu in my Tiki calendar does not sync with the database.

As I'm new to Tikiwiki, how on earth do I fix this short of dropping the table and re-entering the data?

Thanks for your time.

Seems to still be in 1.9.11, as locations are only sometimes remembered.

The problem occurs (at least) when you preview an event before saving on tiki-calendar_edit_item.php.
Still on 3.0.

Is this still an issue? If so please update the tracker version information.
