Description

new user can register but after admin validate his account user can't login because have no password in database

version: tikiwiki 1.9.9 - sirius

conf: allowRegister=y ; validateRegistration=y ; validateUsers=n

Solution

variable order is bad

tiki-register.php (line 132)

//old-->

```
$userlib->add_user($_REQUEST["name"], $apass, $_REQUEST["email"], $_REQUEST["pass"], "", 'n');
```

//new-->

```
$userlib->add_user($_REQUEST["name"], $apass, $_REQUEST["email"], "", $_REQUEST["pass"], 'n');
```

Code was rolled back to before I made that mod, so the realname mod was effectively removed. Please retest and confirm this is now working for you.
