-  Publish Date field skews on post preview where site default time zone is UTC and user time is UTC or inferred

Description

Normally, we want banners from 0h00 to 23h59 and this works well.

However, on banner edit, 3 hours are added (depends on server).

This is a new problem introduced by a fix a few months ago. Tiki 1.10 has much better handling of timezones.

Workaround: On each edit, make sure to change back to 0h00 to 23h59

bug still annoying in Tiki 3.3. And each time you make an edit to the banner, the times seem to change automagically (Even if you didn't touch them yourself)

Philippe Cloutier 01 Dec 10 07:47 GMT-0000

I can't reproduce this on trunk on my PC. Can you reproduce with Tiki 6?
