Description

After upgrading to 1.10, php layers menus from 1.9 are gone from site identity.

Apparently, there are also reports of display of horizontal CSS ("suckerfish") menus not correct. Tag isn't setting horizontal style or getting css/cssmenu_horiz.css so top-level items display vertically rather than horizontally.

Solution

Reactivate site identity and to include {phplayers id=.....} once again in the custom site identity
