## Description

So, in case someone hasn $\tilde{A}$ ¢ $\hat{a}$ ,  $\neg \hat{a}$ ,¢t reported it yet; the  $\tilde{A}$ ¢ $\hat{a}$ ,  $\neg \hat{A}$ "I forgot my password $\tilde{A}$ ¢ $\hat{a}$ ,  $\neg \hat{A}$  functionality doesn $\tilde{A}$ ¢ $\hat{a}$ ,  $\neg \hat{a}$ ,¢t work in 1.9.0.

It sends the email fine; but the password included in the email does not work.

Before I start going through the code can anyone explain how the passwords work?

So far I get:

- that the  $\tilde{A}$ ¢â, $\neg$ Å"hash $\tilde{A}$ ¢â, $\neg$  field is md5( $\tilde{A}$ ¢â, $\neg$ Å"username $\tilde{A}$ ¢â, $\neg$  +  $\tilde{A}$ ¢â, $\neg$ Å"password $\tilde{A}$ ¢â, $\neg$ Â)
- when I do the  $\tilde{A}$ ¢â, $\neg$ Å"forgot pw $\tilde{A}$ ¢â, $\neg$  thing it sets the  $\tilde{A}$ ¢â, $\neg$ Å"provpass $\tilde{A}$ ¢â, $\neg$  field with the pw sent in the email
- md5 of user+provpass though does NOT equal ââ,¬Å"hashââ,¬Â

I suspect code would be something like:

- if user logs in and there is a provpass set then validate against that password
- and then foprce user to change pass
- then use their new entered pass to make hash and delete provpass

Does this seem about right???

## Solution

my bad...

after upgrading from 1.9rc3 to 1.9.0 i also copied over my custom templates - one of those was for the password reminder mail template which didnt have the new link back function which needs to be selected before new password is enabled.

provpass is a clear text random character password, it will NEVER equal username.password in the hash field. as its a NEW password that is generated.

You cannot reverse a md5 hash, which is why a NEW password is emailed.
