Category changes in watch and logs

There is currently no history of changes to categories. Since permissions can now be restricted by categories, it is more & more important to know when an object is changed from one category to another. Therefore, we need this info to be logged in tiki-syslog.php and to be added to the watch item feature. Reminder: categories can be assigned in tiki-admin_categories.php but also when editing a wiki page.

Solution
Watching categories has been added to 1.10
