Description
I have two users at tw.o: xavi and xavidp. Both with lower case.

I can log in on doc.tw.o using either Xavi or xavi. When I log in with user Xavi, when I click on watching adding a page, or watching another page, I get this type of error:

An error occurred in a database query!

Context:
File   tiki-editpage.php
Url    tiki-editpage.php
Query:
insert into `tiki_user_watches`(`user`, `event`, `object`, `email`, `type`, `title`, `url`) values(?,?,?,?,?,?,?)
Values:
0       Xavi
1       wiki_page_changed
2       Tikiwiki 1.10 ca
3       NULL
4       wiki_page
5       Tikiwiki 1.10 ca
6       tiki-index.php?page=Tikiwiki 1.10 ca
Message:
Column 'email' cannot be null
Built query was probably:
insert into `tiki_user_watches`(`user`, `event`, `object`, `email`, `type`, `title`, `url`)
Solution

Are you sure an email is associated with each account? I was not able to reproduce the problem with upper/lower case login.

But, the problem occurs when one tries to add a watch on an object without an email address associated with his account. This is, of course, a bug and has to be fixed.

There are two ways to fix this:

- test if email is present before showing "add watch buttons"
- show an error message (or warning) if somebody adds a watch and does not have an email.

Finally, I solved it with an error message added in function `add_user_watch` (tikilib.php).
