### Description

Sub galleries should, at least optionally, inherit the permissions of their parent (can be overridden of course).

The problem we have here is that if you have a directory for a Project of some sort, and someone creates a subproject gallery, that subgallery is world-viewable, instead of inheriting the Project permissions.

It seems more logical to me to have new children automatically have the permissions of the parentId unless specifically changed.

This would save me so much time from day to day.

liberatic 18 May 14 12:40 GMT-0000

Still the same undesirable behavior on last LTS version. Any recommendation to an agile management of new sub-galleries' permissions?

So thanks in advance!
