Description

Default values in tiki-integrator don't work:

{CODE}
INSERT INTO tiki_integrator_rules VALUES
('1','1','1','.*<body^>*?>(.*?)</body.*','\1','y','n','i','y','Extract code between <body> and </body>
tags');
{CODE}

The 'i' for regex options should be 'ism' to not only ignore case, but process multiline and let '.'
match newlines. As is, it only works if the original page is all on one line.

Likewise the "\1" needs an extra \, and should be '\\1'. mysql is eating the first one and thinking that
it is just unmagicking the '1', which didn't need it.

I would fix this, but editing the .sql files scares me. 😀

Solution

Please upgrade to a recent version of tiki.
If the problem persists, please add a new tracker item.
