Description

It seems that the print and multi-print options are global. I would like to better control which wiki pages can be printed. It would be nice to have a tiki_p_print permission that could be appplied to pages and/or categories and/or structures.

If tiki_p_print = y, then the PRINT button will appear on the wiki page (if the print and/or multiprint options are enabled). Additionally, the page would appear in the list of available pages when using the multiprint option.
