Description
It is possible to make Drawings and even use an image as a background, and draw over it.

But if you have an existing image, you need to modify it before you upload.

Related:
• Integrating fotonotes or wikigraphe or DOM Image annotation to the Image gallery

... should be doable via elFinder...

Hersens 24 Feb 17 17:45 GMT-0000
Hi Marc, I would like to have the image cropped on select before upload, is there a feature on tiki for this?
If yes, kindly direct me to it. else, where/how do i edit to have a js crop code in it?

Thanks.
Marc Laporte 25 Feb 17 15:45 GMT-0000

Feature doesn't yet exist.

"crop before upload": since we'll also want to be able to crop after upload, I am thinking perhaps it's best to focus on that. So it would be a 2-step process. But perhaps you have a use case that requires crop before upload? If so, can you elaborate?

Another option is to use https://doc.tiki.org/Screencast (but as a Java applet, its days are counted and we should find an alternative).

Thanks!

Hersens 25 Feb 17 19:52 GMT-0000

Hi Marc,
Yea I agree with you on crop after upload feature.
"Crop before upload" in my case is to restrict the dimensions of an image upload by allowing the user select image area based on the provided dimension, crops the image, user then upload to the server.
Will see to improving with the Screencast while that's been figured out.

Thanks Marc!
