Related-to

- registration pretty tracker without captcha

Description

When a new user registered with anti-bot and user tracker for more user information getting error message that registration code is invalid.

Here are steps to reproduce the problem.

- 1) Setup user information tracker with couple of fields.
- 2) Go to registration page
- 3) Enter registration details and click 'register'
- 4) This will take you to new screen where user tracker information needs to be filled.
- 5) Once you fill the user tracker information and click 'Save'
- 6) You will get error message that registration code is invalid

Solution

Sylvieg checked a fix into trunk (3.0). I've back ported tiki-register.php to my Tiki 2.0 and it seems to work now. Needs additional testing by others.

---

Confirmed that this is working nicely since many months (years?) ago. At least in current 9.x (future LTS), and 6.x (LTS)

It didn't work for me with 1.10svn from weeks ago, but it worked for me from 1.10svn code from last week. FYI  
Can you retest after updating your svn files?

mmln 09 Jun 08 01:41 GMT-0000

I downloaded the zip file on friday and still not working. Do u still recommend downloading latest files from SVN ?

Xavier de Pedro 11 Jun 08 08:36 GMT-0000

ok, no idea then, sorry. Bug might be still in recent svn

mmln 15 Jun 08 13:03 GMT-0000

Tried by turning off the antibot at the time of registration, now I was able to register a user with custom fields. With anti-bot on still it is an issue and error message is 'Wrong registration code' i.e. related to anti-bot.

I am not a techie but my understanding is once you enter the registartion code and click 'register' it goes to next page where custom fields are entered (by that time new registration code generated and it may not match with what originally generated and I have entered. This is just my interpretation of the problem. I am sure it should be simple fix.

I am running TikiWiki release 2.2 and I still encounter this problem. Not sure if a solution is already out there?

Roberto López 17 Oct 09 08:58 GMT-0000

Some of our users of tiki 4.x (only when using IE7) are experiencing this problem. We are running the current version of tiki in trunk.  
Thanks!

philippeback 02 Dec 10 23:03 GMT-0000

I've configured the pretty tracker for use with the userTracker at registration (Tiki6) and fields do appear but aren't saved in the tracker items fields for some unknown reason.

Where is the userTracker saved? I looked inside registrationlib.php / create\_user() but can't see where it happens.
