Description
Imagine you have 2 wiki pages. Page A and Page B, and Page B is assigned to category X. In page A you use the CATEGORY plugin to list all objects from category X, and thus, it lists the "Page B" name, which links to it.

Then you rename Page B to Page C. In page A, the plugin category still shows name and link to "Page B", and not the updated name and link: "Page C".

This bug has been here for almost a year, and it is present in 1.9 and 1.10
bug still alive on tiki 2.1, and confirmed also after deleting pages, and clearing tiki caches.

It can be tested on (production) site for registered users at:
http://uniwiki.sima.ourproject.org

Maybe outdated, since category pklugin doesn't work any more in 4.x?

and plugin PageList does the trick to list wiki pages based on their category...
