Description
I can't login to http://wiki-translation.com (using 1.10svn from june'08) with my openid account http://xavidp.openid.es

I successfully used that openid account months ago to create a linked tiki account here (xavidp), but it seems that currently it doesn't work. Using the openid box I get the error:

"Authentication error; not a valid OpenID."

Maybe openid is broken? We are using kubrick theme there...

Solution
Assuming this is already fixed. Feel free to reopen if you can reproduce, particularly on branches 3 or 4 or trunk after r24298.

---

apprently fixed on 4.x (at least; what I tried). However, open id at wiki-translation.com doesn't work for me (it seems some local problem there, not on openid feature in tiki).

I experienced the same thing when I upgraded a site of mine to 3.0rc1. However, I had to upgrade my hosting account from php 4 to 5 to do the upgrade and the openID logins for both of my tikiwiki sites started having the same issue the upgraded one and the 2.4 one. both were working fine before I upgraded one of them and changed both to php 5 from version 4.
