Description
Search for javascript in 2.0 using search box performs search for "j-a-<-x->-s-c-r-i-p-t". Happens on tikiwiki.org.

http://tikiwiki.org/tiki-searchindex.php?highlight=javascript&search=

I have a TikiWiki site which requires being able to search text which includes web terms such as j-a-v-a-s-c-r-i-p-t but can't do such a search.

Someone said on IRC this is due to a protective input filter which is altering dangerous text input.

Solution
Fixed in 2.0 final
