Description

I would like Tiki to display each item's freetags when display the search results. This would help end-users determine the relevancy of each item.

Solution

1. On the Admin: Search page add a new option: (if freetags are enabled):
 - Show freetags in search results
2. On the the searchresults and searchindex pages display the freetags for the result items (if the option is enabled and if the item has been tagged).

Does anyone know if this is something that someone has tried implementing? It would be a very useful thing because who wants to search in two different places.

I asked the same in the forum

Are there any solutions for this? I tried it a couple of hours with no result.
