### Description

Hi there,

it is very unhandy to attach files or include images in wiki pages, articles or any other content a user provides. Until now, there are means like:

- Upload a file to a file gallery and reference it manually using the link given.
- Upload a file to a wiki page and reference it manually.
- Try using the WYSIWYG editor and realize it does not upload the image.

Well, what I did is I added some quicktags to your code that opens a custom upload file dialog with a preselected file gallery. The user can browse, upload and add the file into his content in one step. Basically it uploads the file and appends the wiki code at the cursor position.

I will attach you all my environment...there is a file itb\_readme.txt in the root which describes in chapter 3 all the changes I do...maybe somebody of your development team assesses this as an important feature and can leverage some code...

Regards,

Maic
