## Comments

Greg Martin 18 May 05 19:58 GMT-0000

I think I originally fixed this back in 1.4. Case insensitivity is an important usability issue.

AFAICR login names were always \*case sensitive\*. But maybe i'm not in Tiki community for that long 😊. Solution would be to enable that as an option to set it up by admin (login names are case sensitive/insensitive) and in case there already are two logins registered as Marc and marc when switching to case insensitive option to rename them in db to marc1 and marc2 (while keeping the previous login name as a backup in another column/db table).

yoni 14 Jun 05 07:21 GMT-0000

I totally agree with Marc.

Non technical users are in pain (and the webmaster so) with that.

Maybe a choice in the admin->login panel can be added for the admin to choose if case is sensitive or not?

Damian Parker 14 Jun 05 12:52 GMT-0000

They were always case sensitive until a recent change in 1.9 where there was an option to make them insensitive (disabled by default)

DBowen 24 Jul 05 19:48 GMT-0000

What's worse is that when you're editing users you cannot change the case of their name because it thinks you haven't made any changes or something like that.
