Description
Text search on files is not usable in 2.0RC4. Table tiki_files "search data" is empty. Files were uploaded, then I defined MIME types, then reindexed. I clicked on "Reindex all files for search" in Admin>File Galleries but can't tell if anything happened; nothing is in Tiki Logs (I already know there is no code for Debug Console to show what Admin>File Galleries is doing). I defined the MIME filters in http://doc.tikiwiki.org/tiki-index.php?page=Search+Admin&bl=n

This apparently sometimes works. In my "trunk" development system I have different text/.doc files uploaded and those were reindexed after I defined the MIME types.

UPDATE: I had trailing spaces in the MIME type names and the filter commands, due to cut-and-paste behavior. I request that trailing spaced be trimmed from the MIME filter input fields.

Just to be sure and for other's information:

In fact I think it only works if you have those settings in "Administration: File Galleries" panel (tiki-admin.php?page=fgal):
- "Use a directory to store files" enabled, so that files are stored on filesystem (instead of DB),
- "Enable auto indexing on file upload or change" enabled (i.e. fgal_enable_auto_indexing preference),
- "MIME Type" / "System Command" fields have been set to use some externals programs installed on your server that can convert your files, depending on their types, into text

If you are not in one of those cases, I suggest you to try those settings in "Administration: Search" panel (tiki-admin.php?page=search):
- "Activate MySQL 'Full-Text' feature" DISABLED, so that it uses TikiWiki's own indexation,
- "Search refresh mode:" = 'normal'

This way, it will be a bit slower to index your files, but it will handle at least files with a text mimetype out of the box when uploading them. This is compatible with the "MIME Type" / "System Command" fields that could be used for other file types.

About trimming trailing spaces, good suggestion, I'll do this in the development branch.
