Description
    When installed from source code, in panorama.freewebhosting247.com, there is only blank screen
    when:

    1) using old 2.0rc4 user modifed "basic profile"
    2) clean database with "basic profile"

    I only see blank screen.

    This is despite using header_simple.tpl and my own empty header.
    The error must be in a script after the header but because by default, there is no error shown at all,
    this is impossible to guess.

    When I reinstalled "default profile", it worked. It shows the menu. I can do some maintainance now,
    including changing passwords, and the admin menu.

Solution
    Use default profile only. Cannot upgrade from earlier rc4.

    Once installed the first step will be to enable the error reporting so can we can start debugging it.

Fatal error: Call to undefined method TikiDate::setLocalTime() in /home/othman/public_html/tiki/lib/tikilib.php on line 7316

So this is the culprit. An undefined function.

othman 16 Aug 08 03:46 GMT-0000

apears to be an installation related problem. The include path for "pear" is not accurate.

The use of doulbe quotes may not be desirable in multi-platform installations. It should be better to hardcode the pear include path.
