Thanks for these informations.

We're definitely not able to reproduce your problem. We suspect a database upgrade problem. Could you, please:

- Re-run the 1.9 to 2.0 upgrade script,
- Verify if your problem still occurs

- If you still have the problem, give us your database schema (ie database dump without datas) and the mysql version

We suspect that your tiki_categorized_objects table contains the "name" field and it should not. Ultimately, you may have to install from scratch a new 2.0 version and move data from the old tiki to the new one.

29 Aug 08 21:08 GMT-0000

I still have the problem

Mysql Version 4.0.24

tiki_categorized_objects table contains the "name" field

29 Aug 08 21:13 GMT-0000

Please, How can I "move data from the old tiki to the new one"?

Thanks

02 Sep 08 15:37 GMT-0000

in categlib.php I'd changed the 378

```
$where .= " AND (`name` LIKE ? OR `description` LIKE ?)";
```

By

```
$where .= " AND (o.`name` LIKE ? OR o.`description` LIKE ?)";
```

Can you confirm that it's correct
