Description

Currently quicktags must be defined individually for each different feature. It would be nice if you could define one set of quicktags for multiple features. If you define a good set of quicktags for one feature, say the Wiki, the only way to propagate that set to other features would be to do a manual copy and paste (very time consuming) or modify the database table/s directly (Not easy for the novice user).

Solution

All quicktags to be set for multiple features instead of just one. i.e. the "category" field should accept multiple, comma delimited values.
