Description

I am having an issue with installing v2.0 on IIS with MSSQL backend.

After entering all of the info such as database server, name, and login info, it returns the following error:

```
PHP Fatal error: Call to a member function fetchRow() on a non-object in  
C:\inetpub\wwwroot\tikiwiki\installer\tiki-installer.php on line 43
```

This appears to be the MSSQL version of bug ID 1653.

Solution

Please upgrade to a recent version of tiki.
If the problem persists, please add a new tracker item.

I beleive there is no MSSQL support on 3.0 though.
So you'll have to use another db as MSSQL was dropped.
