Description

Our site has a lot of child pages that are included by parent pages. When accessed individually, they make much less sense than if they are accessed as part of the parent page that includes them.

Is there a way to restrict the Search functionality of TikiWiki to only return pages that meet a certain criteria? Eg, pages that would be in the format tiki-index.php?page=Title/PageGroup

I have referred to the tiki-admin.php?page=search page but could not find anything that fit the bill.

Solution

nikhilodeon 9/19/2008 3:10 PM EST: workaround developed: add the following if statement in the section loop of /templates/tiki-searchresults.tpl; filters out results so that only those with _String_ in the pageName / Title field are displayed.

```
{if $resultssearch.pageName|strstr:"_String_"} {/if}
```
