Description

I frequently use the image gallery and have an default scale for all pictures.

Since the switch to 2.0 (and a new username) my gallery does not store the thumbnail and scaled size of pictures which results in really slow performance because each time the pictures is resized on the fly.

There are no new files in the directory for the image gallery nor are new rows to the tiki_images_data table.

I do not get any error message.

What could be wrong?

How could I check and fix it?

Any help appreciated.

Hannes

I saw something like this.. well it was close: it kept making up "thumbnails" that were the same size as the original. It went away when I unchecked the box for 'other users can upload to this gallery' (not sure why I checked that box anyway..).

Is this consistent with your problem?
