Description
I'm having a problem installing the workspace mod in v. 2.0. I get an error message that indicates that only 4 fields are being inserted into the table, although the table structure indicates that there are 5 columns. (The missing column appears to be the ICON field.) Is there a known workaround for this problem? I've thought of modifying the table structure, but I suspect that would be setting up for problems down the road.

Solution
As at least a temporary work-around, I edited the INSERT strings in "features-aulawiki.info.txt" to add a NULL field to the set of VALUES. This allowed a successful install to take place.

Fixed since some months ago. It works for me in current AulaWiki Mod 1.7.1 (in mods.tikiwiki.org) installed by hand, and fix for automatic installation is on svn.
