Description
I could be nice to have a kind-of "History Flow" application, or feature, integrated in the Wiki.
Such as the "History Flow" (http://researchweb.watson.ibm.com/history/) developed by people from
MIT and owned by IBM (afaik)

I'm not skilled on CVS, but I wonder if this is already developed for CVs applications. (gCVS, for
instance, for GN/Linux Gnome)

And from thepoint of view of Tiki, I know there is the option "export all" tiki versions of a page, at
wiki page edit time. Could this be used to see more easily all the changes that a user has made to a
document, etc.?

(I'm thinking in the educational scenarios where as teachers we have to review a user contribution
to a collective document, and grade it, etc.).

While we can "built" some reports with unified-index and (gantt?) charts there is no such functionality in Tiki23. Please review your ticket and add up-to-date details (link provided is 404).
