Description
"If a user upload a big avatar (more than 45x45 px) tiki 2.1 not 'avatarize' and show the big image in the forums. This problem may be very uncomfortable when you read a forum topic."

I can confirm that this still occurs on tiki.org and whatever Tiki version it is running presently, specifically with GIF images. — ssanders

Solution
Change the line 1073 of /lib/tikiklib.php

```
$ret = "<img border='0' src='tiki-show_user_avatar.php?user=$user' " . $style . " alt='$user' />";
```

by

```
$ret = "<img border='0' width='45' height='45' src='tiki-show_user_avatar.php?user=$user' " . $style . " alt='$user' />";
```
(like in tiki 1.9)

or, for rectangular avatars:

```
$ret = "<img border='0' height='45' src='tiki-show_user_avatar.php?user=$user' " . $style . " alt='$user' />";
```

This change works in http://precarios.org/

I, Chealer9, can't reproduce this bug in trunk. I'm closing assuming this was fixed. Please reopen if you can reproduce in a current version.
