Description

Have had this issue since 1.9.10.1 and it's still there in all subsequent versions even though the previous bug report detailing the same issue (#1649) says it's fixed.

The posted solution may work - although the Comments section of that bug report details a differing fix.

Would be good to get this fixed in the codebase rather than manually adding a fix to each new release.

If you need further info from me - please email nickallentbwa-at-gmail.com

When I try to add a page to a structure, I get this error:

=====

An error occured in a database query!

Context:

File tiki-edit_structure.php

Url tiki-edit_structure.php

Query:

insert into `tiki_structures`(`parent_id`,`page_id`,`page_alias`,`pos`) values(?,?,?,?)

Values:

0 407

1 116

2

3 1

Message:

Field 'structure_id' doesn't have a default value

Built query was probably:

```
insert into `tiki_structures`(`parent_id`,`page_id`,`page_alias`,`pos`) values('407','116','',1')
```

=====

Workaround

Xavi: works for me in Tiki 3.1. Please re-test.
