

Spaces & underscore to be equivalents

a and A are equivalent. This makes perfect sense for page names, user names, etc Accented characters (ÃÃ¸) should be as well

For wiki page names (see how Wikipedia does it) but it could be that ((User_Profile)), ((User+Profile)) and ((User Profile)) are equivalent.

Should hyphen (-) be an equivalent character as well?

How about (,) and (.)

. doesn't play nice with rewrite rules

Moved discussion to: [Character substitutions](#)
