### Rating

★★★★★ (0) 

### Description

After successful install,  
final page suggests that PHP's memory\_limit should be  $\geq 16M$ .  
But, big red box warns that the PHP memory\_limit is 16M!

No problem technically, but confusing to new, non-tech, or inexperienced users. Installers are very important for the initial experience of new users.

### Solution

Ensure that the warning and the text right above are consistent.  
Probably changing the PHP mem test from " $\leq 16M$ " to " $< 16M$ " (if it's technically true). Else change the text above to strongly suggest increasing the PHP mem to over 16M.

### Importance
