Description
  When I was testing various CMS/Wikis for a project, I ran across a module for another (Joomla or Drupal, can't remember which) CMS which allowed a user role or group to automatically generate a personal page, an image gallery, a weblog and any type of content page. It would be extremely useful for my project, but one of the few things missing from Tikiwiki (which is why I am implementing Tikiwiki, it has all of the other features I need in one install).

Solution
  A feature which allows the administrator to enable these features to be included as part of the individual user, in a group, experience. This could be valuable for communities, like mine, where each user is their own author of content and is allowed to host the content through their own "portal".

ML:
Data Channels do this. Just build your profile.
