Description

tiki-download_file.php and &display=y incompatible with Firefox 3.0x and PDF files

Attempting to have tiki-download_file.php display a PDF in browser using &display=y parameter... tiki-download_file attempts to open the file as a PHP file, not a PDF. Other browsers can correctly display the PDF file.

From within an Article...

DOES NOT DISPLAY IN FIREFOX... DISPLAYS IN WINDOW IN OTHER BROWSERS

Maybe there is a better way to display PDFs from the File Gallery in-browser-window, but I haven't seen the documentation on how to do it with internal Wiki File Gallery files.
