Description
I created one menu with multiple sub-items. I then applied it to user module, e.g.

{phplayers id=44 type=vert}

And displayed it on the right column. All good so far.

But when I added another menu with PHPlayers, e.g.

{phplayers id=45 type=vert}

then the first menu no longer showed the roll-over menus in the proper place, nor did they disapear after exit.

Solution
I'm guessing the PHPlayers script is not creating unique IDs for the menus array and thus multiple menus are effecting eachother. But I'm not a JS or PHPlayer expert so.. :-/
