Description

When you try to create a {CODE()} {CODE} block in the Wiki which contains \$0 somewhere (which is, e.g., quite common in Unix init scripts), the page won't be displayed (white screen).

this is easily reproducible by inserting the following into a Wiki page:

```
{CODE()}$0 {CODE}
```

The bug was not present in previous versions (I recently upgraded from 1.8.5 to 1.9.0).

And as you can see, it works correctly here in the Tracker:

\$0

Solution

Works for me and works here..
