Description

There seems to be an view menuitem "access rights" bug in the menu system
at least in my horisontalcustom PHPlayers menu
when having several groups assigned to a menuitem.

How to verify bug:
I have one person assigned to group "Group_a"
and another person assigned to group "Group_b"

I have a menuitem that allows users with group
"Group_a" or "Group_b" to show menuitem.

But the menuitem is not shown in the menu
for any of the two users.

Edit menu option:
Name: Pictures bla. bla.
url: tiki-browse_gallery.php?galleryId=54
For wiki page, use PageName.
Sections:
Permissions:
Group: Group_a and Group_b SELECTED in listbox
Type: option Position: 52

If I assign the menuitem for one group only it works fine
but nbot if I assign more than one group.

I use Tikiwiki version 2.2

Can anyone verify this bug?
This bug needs to be fixed 😀

Solution
    Workaround:
    To make identical menuitems, assigning one menuitem for each group...
    but a mess to look at as administrator because you see all menuitems 😀

    I do not know how to fix as I have not installed a working Tikiwiki development environment yet 😀
