Description

The very useful wiki plugin catorphans only works with wiki pages.

The documentation suggests it is sort of set up to deal with different types of uncategorised objects by setting the objects=> parameter to various values ie
wiki|article|blog|faq|fgal|forum|igal|newsletter|poll|quizz|survey|tracker.

But looking at the plugin code, the code comments make it clear that the development is not yet complete and only the 'wiki' object has been coded.

The documentation has been updated to make this clear - but extending this plugin to the other features would be very useful now that Categorisation is the major permission/access control mechanism in Tiki

Solution

Plugin substantially updated in a series of commits from 54960 onwards
