Description
Not sure if this is a small bug or a feature request - but now that I have used the very useful Dynamic Variable feature in a number of sites I realise that a quirk of the feature is that only the first instance of the use of an individual variable in an individual wiki page is editable.

If you use the same variable a number of times in an individual page then the 2nd and any subsequent uses are not linkable to the edit facility.

This seems a bit inconsistent and it would be much more useful if any/all instances could be used to update/change the variable.

If this is unavoidable then it would be useful to declare this in the documentation.

Closing this as its not that important any more (Geoff Aug 2013)
