Description
v2.2

When an item has a Freetag added and the Freetag menu looks for content with a designated tag it
will list ALL content - even if some pages are Categorized and the particular user doing the search
does not have permission to access the page.

Obviously the user cannot actually access the page but being able to see it makes them think it is
available to them and just knowing a particular page exists may create difficulties.

Need to filter the objects being listed (presumably in tiki-browse_freetags.php in a similar way that
tiki-listpages.php does this) so that only objects that the individual user is allowed to see are listed.

Solution
Fixed in 3.0
