Description
When you are on a page of a wiki structure, you can click on the print icon, but you will only print that single page.

The icon and option to "print this page and all the subpages" (= in the the sub-structure) right from there (without going through all the clicks at "Wiki > multiprint > select structure > print") would be very welcome, since the base feature to rpint the full structure exists.

From the home of the structure, it would print the full structure (as it can be done with one click from a structure within a Workspace through AulaWiki mod, or through many clicks as usual, as explained above).

If the user is on a subpage of the structure, that button would print that page and all subpages from the same structure.

Does it make sense?
