Description

In tikiwiki 2.2, I created a file gallery and then attempted to upload a file. Set to save in database.

With `memory_limit` in `php.ini` set to 32M, the upload page says max file size is limited to 4MB. I can upload files that are smaller than 1 MB, but files larger than 1MB produce the PHP error message:

Fatal error:Allowed memory size of 33554432 bytes exhausted (tried to allocate ... bytes) in ...\\lib\\tikidb\\lib.php on line 208

If I set the `memory_limit` to 64 MB, the upload page says max file size is limited to 15MB. If I try to upload a file larger than 1 MB, PHP generates the error:

Fatal error:Call to member function fetchRow() on a non-object in ...\\lib\\tikiklib.php on line 920

If I set to save to a folder instead, upload works.

Solution

In `/etc/my.cnf`, change the following line to the desired max upload size.

`max_allowed_packet = 1M`

You need to edit the `UPLOAD_MAX_FILESIZE` variable — not the memory limit. See the FAQ for details:
http://doc.tikiwiki.org/tiki-view_faq.php?faqId=8#q27

Ahmad Fahad 24 Mar 09 13:34 GMT-0000

I have tried continuously to upload files > 1MB both attached to Wiki Pages, and to the file gallery, both result in the file not uploading.

Beestje 20 Apr 09 15:08 GMT-0000

I think you need to change the setting in the `mySQL` configuration file as well.
In `/etc/my.cnf` set following line to the desired max size :
`max_allowed_packet = 1M`
