### Description

This has been seen on Tikiwiki 2.0 & 2.2: Trying to install the "googlecalendar" wikiplugin from "Admin mods" fails. A page appears stating "wiki-plugins/googlecalendar/wiki-plugins/wikiplugin\_googlecalendar.php" to impossible to copy".

This appears to be caused by a typo in the Packages/wikiplugins-googlecalendar.info.txt file on the line that states where to copy the plugin file to. There is no space between the source and destination paths and the "lib" directory the plugin should be copied to is missing.

### Solution

Change line 11 of Packages/wikiplugins-googlecalendar.info.txt :

11c11

< wiki-plugins/googlecalendar/wiki-plugins/wikiplugin\_googlecalendar.php

---

> wiki-plugins/googlecalendar lib/wiki-plugins/wikiplugin\_googlecalendar.php
