Description

Hi All,

Iâ€™m working on the Tikiwiki 2.2 with a LDAP authentication.

In the login option, I see it is possible to automatically give someone access in the Tiki if this person is in LDAP directory.

My question is: Is it possible to define access with a Distribution List group and not with the entire LDAP directory?

On another note, do you know why â€œLDAP Member is DNâ€ can not be set to â€œyes?â€

Thanks for your response

Hi, we are currently reviewing a lot of LDAP-authentication issues.
Is this issue still there on recent Tiki versions? Tiki 2.x is quite old and out of support.

I have not found your reference to «LDAP Member is DN» maybe the wording changed.

Have you managed to restrict to the Distribution List by changing the «Base DN»?
